Kaprex is a slam dunk!

Powerful joint relief formula clinically shown to relieve minor pain

Feel confident that when you recommend Kaprex to your patients, trust is in your court. Featuring a synergistic blend of all-natural ingredients, Kaprex has proven a safe and effective alternative, both in laboratory and human clinical trials.

Patient benefits:

- Scientifically engineered for safety and effectiveness
- Friendly to the gastrointestinal (GI) tract
- Modifies prostaglandin signals associated with minor pain
- Ingredient synergy provides high bioavailability at low dose

Human clinical research results

Kaprex was tested in subjects with joint discomfort in an 8-week observational trial conducted at the Functional Medicine Research Center (FMRC)—the clinical research arm of Metagenics. Minor pain was assessed using the Visual Analog Scale (VAS) and a reliable, validated, condition-specific questionnaire. Both tests indicated a substantial decrease in minor pain, the majority of which occurred during the first 4 weeks. Final results:

- Validated condition-specific questionnaire showed a 40% decrease in joint discomfort
- VAS showed a 50% decrease in joint discomfort
- A 50% reduction in minor pain is considered the “gold standard” for analgesic formulations

Kaprex outperforms leading competitors

Compared to leading competitive joint relief formulas, Kaprex demonstrated superior activity as measured by inhibition of PGE2 production. In fact, at equal weights, Kaprex had *2.5 to 421 times greater activity than competitive formulas!*
